and annual shorts and attended above appear

## WHAT IS CLAIMED IS:

5

1. A closure device, comprising:

first and second fastening strips, the fastening strips have a longitudinal X axis, a transverse Y axis and a vertical Z axis, the fastening strips are arranged to be occluded over a predetermined length in the X axis, the first fastening strip includes a first portion with a first color, the first color is not visible when viewed in the Z axis when the fastening strips are occluded.

- 2. The invention as in claim 1 wherein the first color is visible when viewed in the Z axis when the fastening strips are deoccluded.
  - 3. The invention as in claim 1 wherein the second fastening strip includes a second portion with the first color.

- 4. The invention as in claim 1 wherein the first fastening strip includes a third portion with a second color.
- 5. The invention as in claim 1 wherein the second fastening strip includes a fourth portion with a second color.
  - 6. The invention as in claim 1 wherein the first portion is a closure element.

30

7. The invention as in claim 4 wherein the third portion is a flange.

- 8. The invention as in claim 5 wherein the fourth portion is a flange.
- 9. The invention as in claim 1 wherein the first portion is a closure element, the second fastening strip includes a closure element with the first color, the first fastening strip includes a flange with a second color, the second fastening strip includes a flange with a second color.
  - 10. The invention as in claim 9 wherein the closure elements are U-channel closure elements, the flanges are located above the closure elements, the flanges extend inward toward each other.
  - 11 The invention as in claim 10 wherein the closure device includes a slider slidably disposed on the fastening strips, the slider facilitates occlusion of the fastening strips.
  - 12. The invention as in claim 1 wherein the closure device includes a slider slidably disposed on the fastening strips, the slider facilitates occlusion of the fastening strips.
    - 13. A container comprising:

first and second sidewalls joined to form a compartment with an opening;

first and second fastening strips respectively connected to the first and second sidewalls at the opening,

the fastening strips have a longitudinal X axis, a transverse Y axis and a vertical Z axis, the fastening strips are arranged to be occluded over a predetermined length in the X axis, the first fastening strip includes a first portion with a first color, the first color is not visible when viewed in the Z axis when the fastening strips are occluded.

14. A method of manufacturing a closure device,10 comprising:

providing first and second fastening strips, the fastening strips have a longitudinal X axis, a transverse Y axis and a vertical Z axis, the fastening strips are arranged to be occluded over a predetermined length in the X axis,

providing the first fastening strip includes a first portion with a first color, the first color is not visible when viewed in the Z axis when the fastening strips are occluded.
